

A METHOD AND SYSTEM FOR PROVIDING REAL TIME SPORTS BETTING INFORMATION

ABSTRACT

5

The present invention is directed toward a method and system for providing sports betting information, in real time, utilizing a standard Internet connection on a computer to display the odds from a plurality of sports books. The system provides its users with a line seeker alert, a major line move alert, a bet tracker, and a fully customizable display. A method 0 of gaining real time sports betting information without the use of a web browser, through the use of a separate program written in the C++ programming language is disclosed.
